Learning for All*

Executive Summary

Multiple Evidence Forms, Pointing in One Direction

Accelerating Learning for All (ALfA) is a groundbreaking paired learning pedagogy that enables children to learn foundational skills in as little as 45 days. The program uses simple, highly visual modules and hands-on activities to make learning swift and enjoyable. ALfA is being used in over 10,000 government schools around India, and at a smaller scale internationally in Ghana, Peru and Maldives.

This brief presents the quantitative evidence for ALfA, arising from four distinct sources:

GOVERNMENT'S OWN TESTS (P4-5)

Government tests such as the PARAKH Rashtriya Sarvekshan (PRS) are conducted at a large scale, geography wide. While granular school- or student- level data isn't publicly available, we can observe interesting trends at the district level. Generally, districts using ALfA at scale – from Lucknow, Shamli and Barabanki in UP to Solan in HP – have made larger gains than their state averages.

THIRD PARTY EVALUATIONS (P6-7)

ALfA implementation in Shamli, UP has been studied by researchers at Harvard Graduate School of Education, featuring in a book by Prof. Fernando Reimers. Internationally, ALfA has been implemented and studied by agencies such as Olinga Foundation (Ghana), ArcaBeta NGO (Peru), and Ministry of Education & UNICEF (Maldives).

4 + 4 RESEARCH PILOTS (P8-9)

The DEVI team has conducted numerous research pilots using a mini-RCTs (randomised control trials). The assessments have generally been conducted by DIET or other college students, under the purview of DIET Principals and/or BSAs. This rigorous research design enables effect size calculations.

LARGE-SCALE ASSESSMENTS (P10-11)

In some geographies, DEVI Sansthan has also conducted tests of thousands of students. These NIPUN competency assessments offer a rich database of student- and school- level progress. While these geographies did not have control schools, testing across multiple grades allows a pseudo-longitudinal approach which indicates that a few months of ALfA is worth several years of business-as-usual schooling.

RAPID RESULTS INITIATIVES **RRI**

Using a 3-stage Rapid Results Initiative, and by showcasing results in a short time, DEVI's FLN work has expanded rapidly across India and increasingly worldwide.

Stage 1: Study

Study of existing impact or pilot / Randomized Control Trial (RCT).

Stage 2: Scale

Scale to thousands of schools.

Stage 3: Sustain

Integrate system-wide (supplement or embedded).

Government's Own Tests Evidence at Scale

The National Achievement Survey (NAS) 2021 tested 5.44 lakh students across over 28,000 schools; finding an overall result of 62% in language and 57% in mathematics for Grade 3. By the time of Parakh Rashtriya Sarvekshan (PRS) 2024, with an even larger sample of 21.15 lakh students across over 74,000 schools, test scores had risen only marginally to 64% in language and 60% in mathematics.

The first piece of evidence for ALfA efficacy is that districts implementing ALfA have experienced a larger gain from 2021 to 2024 than other approaches (by other NGOs' cluster of districts). This does not prove causality, but in relation to other approaches, seems to suggest that classroom-based interventions may matter more than we think.

Scan QR to read a detailed analysis of UP NAS 2021 to PRS 2024 results

Group	Grade 3 Language			Grade 3 Numeracy		
	NAS 2021 (%)	PRS 2024 (%)	Gain (pp)	NAS 2021 (%)	PRS 2024 (%)	Gain (pp)
India Overall	62	64	+2	57	60	+3
UP Overall	58	68	+10	54	64	+10
LLF (5 districts)	60	68	+8	55	64	+9
CSF (6 districts)	58	64	+6	53	60	+7
DEVI (4 districts)	61	74	+13	55	69	+14

Another large scale government test which indicated ALfA's efficacy was the NIPUN Assessment Test 2023 (Uttar Pradesh). While the state overall had 24% of schools declared NIPUN, in Shamli district (where 200 schools were using ALfA) 36% became NIPUN. More remarkably, Hilauli block (155 of 155 schools using ALfA) achieved 47% of schools NIPUN status, over triple the rate of Unnao district (15%).

Strengths of this Evidence Form

- ✓ Very large sample size
- ✓ Allows macro-scale comparison
- ✓ Data trusted by government
- ✓ Competency-wise data is available

Limitations of this Evidence Form

- ✗ Tests only conducted infrequently
- ✗ Granular school & student level data not publically available
- ✗ Doesn't prove causality, only correlation

RESULTS AT SCALE **NAS 2021 to PRS 2024**

Districts using ALfA at scale saw large improvements in their score for Grade 3 language and maths in Parakh 2024, compared to the NAS 2021. ALfA-implementing districts in Uttar Pradesh saw an increase of 13 percentage points in language and 14 pp in maths – well above the state average of 10pp. District Solan in Himachal Pradesh saw even larger improvements of +18 pp and +23 pp, also well above state average.

Third Party Evaluations Rigorous Evidence

The ALfA program has been evaluated by partner organisations in several implementations both within India and internationally, as shown in the table below. In Shamli, DEVI conducted the implementation and Harvard students evaluated it. In other countries, DEVI has conducted online training and provided materials, while the local partner has implemented and also conducted testing.

Geography	Evaluator/ Partner	Design	Schools (ALfA + non)	Students (ALfA + non)	Duration
Shamli, India	HGSE	RCT	10 + 10	420 + 547	July-Oct 2022
Maldives	Ministry of Education & UNICEF	RCT	13 + 5	665	Sept-Dec 2023
Ayensuano, Ghana	Olinga Foundation	RCT	12 + 9	604 + 377	2 Phases in 2024 & 2025
Loreto State, Peru	ArcaBeta NGO	Pre-Post	2 + NA	360	2 Phases in 2024 & 2025

HARVARD UNIVERSITY

“

*The effect size of the project was **0.23 for Grade 3** students and **0.89 for Grade 5**... the results suggest there is significant value in pursuing the ALfA model in other schools if implemented in a coherent, structured, and coordinated manner.*

by Prof. Fernando Reimers, et. al.
Harvard Graduate School of Education

Strengths of this Evidence Form

- ✓ Rigorous, externally published
- ✓ Study design enables calculation of effect sizes
- ✓ International angle indicates applicability across diverse contexts

Limitations of this Evidence Form

- x Only comparison to control group, no comparisons to other pedagogies or results globally

VALIDATED RESULTS ACROSS CONTEXTS

Across different geographies where ALfA has been implemented and/or evaluated by a third party, randomised control trials have shown larger gains in ALfA schools compared to control, with far larger proportions of students achieving proficiency in both literacy and numeracy. In Peru, where there was a simple pre-post test with no control, the rapid learning gains of ALfA group provides strong evidence of its efficacy.

4+4 Research Pilots Randomised Control Trials

Before scaling in a new geography, DEVI conducts a rigorous research study under the supervision of the BSA, DIET Principal, or another government authority. Eight schools are randomly selected and divided into four intervention and four control schools. Baseline and endline assessments are conducted in both groups, followed by a difference-in-differences analysis to measure ALfA's impact.

4+4 RANDOMISED CONTROL TRIALS

Strengths of this Evidence Form

- ✓ Tests conducted under BSA/DIET principal supervision
- ✓ Randomised Control Trial

Limitations of this Evidence Form

- ✗ Relatively small sample size of 4 intervention & 4 control schools
- ✗ Sometimes delays between teacher training and baseline increased baseline scores of treatment group

Large-Scale Assessments

Geography-wide implementations

DEVI has also arranged for large-sample-size assessments in some geographies where ALfA is being implemented across a whole block or district. This has typically involved testing across all Grades 1-5. Though there are no control schools in this approach, a pseudo-longitudinal approach allows an estimation of ALfA's efficacy. For instance, Grade 1 students in Reasi, Jammu increased their test scores from 31% to 61% with 6 months of ALfA implementation. The same schools' Grade 5 students had scored 61% at the baseline - indicating that ALfA had created approximately 4 years' worth of learning gain. Other geographies in Jammu and Uttar Pradesh had similarly dramatic outcomes.

Geography	Schools	Students	Hindi, Grade 3	Maths, Grade 3
Rajouri, Jammu	61	1,023	26%→82% +56pp	28%→90% +72pp
Reasi, Jammu	112	3,230	42%→68% +26pp	57%→78% +21pp
Hilauli (Unnao) UP	155	14,503	46%→69% +23pp	35%→55% +20pp
